

3101, 3101A 16 x 4 BIT HIGH SPEED RAM

- Fast Access Time — 35 nsec max over 0-75°C Temperature Range (3101A)
- Simple Memory Expansion through Chip Select Input — 17 nsec max over 0-75°C Temperature Range (3101A)
- DTL and TTL Compatible — Low Input Load Current: 0.25 mA max
- OR-Tie Capability — Open Collector Outputs
- Fully Decoded — on Chip Address Decode and Buffer
- Minimum Line Reflection — Low Voltage Diode Input Clamp
- Ceramic and Plastic Package — 16 Pin Dual In-Line Configuration

The Intel 3101 and 3101A are high speed fully decoded 64 bit random access memories, organized 16 words by 4 bits. Their high speed makes them ideal in scratch pad applications. An unselected chip will not generate noise at its output during writing of a selected chip. The output is held high on an unselected chip regardless of the state of the read/write signal.

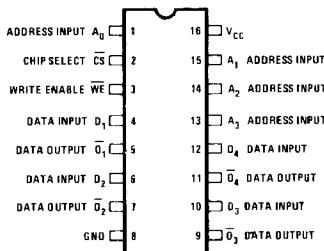

The use of Schottky barrier diode clamped transistors to obtain fast switching speeds results in higher performance than equivalent devices with gold diffusion processes.

The Intel 3101 and 3101A are packaged in either hermetically sealed 16 pin ceramic packages, or in low cost silicone packages, and their performance is specified over a temperature range from 0°C to 75°C.

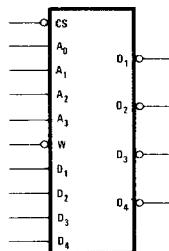

The storage cells are addressed through an on chip 1 of 16 binary decoder using four input address leads. A separate Chip Select lead allows easy selection of an individual package when outputs are OR-tied.

In addition to the address leads and the Chip Select lead, there is a write input which allows data presented at the data leads to be entered at the addressed storage cells.

Absolute Maximum Ratings*

Temperature Under Bias:	Ceramic	-65°C to +125°C
	Plastic	-65°C to +75°C
Storage Temperature		-65°C to +160°C
All Output or Supply Voltages		-0.5 to +7 Volts
All Input Voltages		-1.0 to +5.5 Volts
Output Currents		100 mA

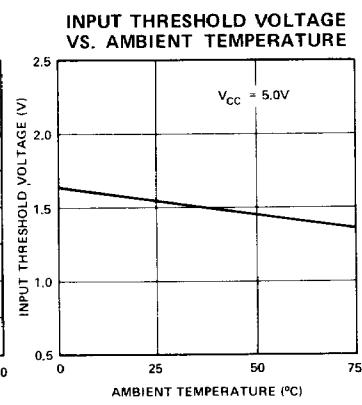

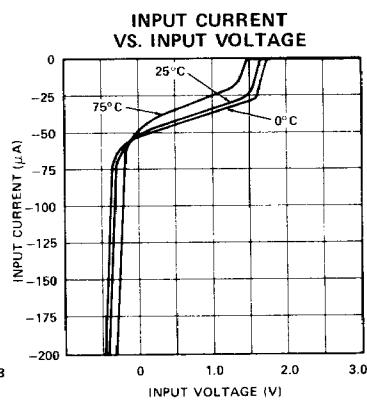

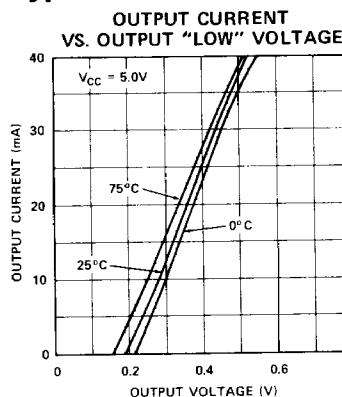

*COMMENT:

Stresses above those listed under "Absolute Maximum Rating" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or at any other condition above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
